Spaced recall · Anatomy · Physiology · Molecular Medicine · X-type MCQ practice · Consolidation and review · Timed mock

Week 1: Foundations

The cell, molecules, blood and immunity. Everything later in the plan builds on this week.

Time	Mon Day 1	Tue Day 2	Wed Day 3	Thu Day 4	Fri Day 5	Sat Day 6	Sun Day 7
08:00 08:30 30 min	Spaced recall **Orientation** Read all three official objective lists and rate every section 1 to 5 for confidence. Check against the WAPT objectives	Spaced recall **Recall: Monday** Directional terms and organelles, blank page first. Check against the WAPT objectives	Spaced recall **Recall: transport, tissues** Plus Monday's terms. Check against the WAPT objectives	Spaced recall **Recall: DNA, cell cycle** Blank page, then check. Check against the WAPT objectives	Spaced recall **Recall: gene expression, blood** Plus Tuesday's transport. Check against the WAPT objectives	Spaced recall **Week 1 recall** Blank-page dump of the whole week, topic by topic. Check against the WAPT objectives	**Day off** No studying. Rest is part of the plan.
10 min break							
08:40 09:40 60 min	Anatomy **Anatomical language** Planes, positions, directional terms and terms of movement. Find a lecture on this topic	Physiology **Membrane transport** Diffusion, osmosis, carriers, the Na^+/K^+ pump and resting membrane potential. Find a lecture on this topic	Molecular Medicine **DNA and replication** Nucleotide structure, replication enzymes, leading and lagging strands. Find a lecture on this topic	Molecular Medicine **Gene expression** Transcription, RNA processing, translation and gene regulation. Find a lecture on this topic	Physiology **Haemostasis** Platelet plug, coagulation cascade and fibrinolysis. Find a lecture on this topic	Consolidation **Weak-spot repair** Re-learn the three topics you rated or scored lowest. Check against the WAPT objectives	
10 min break							
09:50 10:50 60 min	Molecular Medicine **The cell** Organelles, membrane structure and the fluid mosaic model. Find a lecture on this topic	Anatomy **Tissues and epithelia** The four tissue types, epithelial classification and cell junctions. Find a lecture on this topic	Molecular Medicine **Cell cycle and division** Phases, checkpoints, mitosis versus meiosis. Find a lecture on this topic	Physiology **Blood** Composition, haematopoiesis, red cells and haemoglobin. Find a lecture on this topic	Molecular Medicine **Immunology basics** Innate versus adaptive immunity, B and T cells, antibodies. Find a lecture on this topic	MCQ practice **Timed mixed set** All of week 1 at exam pace. Check against the WAPT objectives	
25 min break: move, eat							
11:15 12:15 60 min	MCQ practice **Baseline questions** Untimed X-type questions across all three components, from any source. Score each one separately. Check against the WAPT objectives	MCQ practice **X-type set** Transport and tissues. Check against the WAPT objectives	MCQ practice **X-type set** DNA, replication and the cell cycle. Check against the WAPT objectives	MCQ practice **X-type set** Gene expression and blood. Check against the WAPT objectives	MCQ practice **X-type set** Haemostasis and immunity. Check against the WAPT objectives	Consolidation **Error log** For every wrong statement, write why it was wrong. Check against the WAPT objectives	
10 min break							
12:25 12:55 30 min	Consolidation **One-page summary** Terms and organelles from memory, then check and flag the gaps. Check against the WAPT objectives	Consolidation **Redraw** The Na^+/K^+ pump and the epithelial types from memory. Check against the WAPT objectives	Consolidation **Flashcards** Replication enzymes and cell-cycle checkpoints. Check against the WAPT objectives	Consolidation **Flowchart** The central dogma, with where each step happens in the cell. Check against the WAPT objectives	Consolidation **Redraw** The coagulation cascade, start to finish. Check against the WAPT objectives	Consolidation **Plan week 2** Adjust next week's emphasis using today's scores. Check against the WAPT objectives	

Spaced recall · Anatomy · Physiology · Molecular Medicine · X-type MCQ practice · Consolidation and review · Timed mock

Week 2: Heart, lungs and kidneys

The cardiorespiratory and renal systems, with anatomy and physiology studied side by side.

Time	Mon Day 8	Tue Day 9	Wed Day 10	Thu Day 11	Fri Day 12	Sat Day 13	Sun Day 14
08:00 08:30 30 min	Spaced recall **Spaced recall: week 1** The cell, DNA and gene expression. Check against the WAPT objectives	Spaced recall **Recall: the heart** Blank page, then check. Check against the WAPT objectives	Spaced recall **Recall: circulation** Plus week 1 haemostasis. Check against the WAPT objectives	Spaced recall **Recall: respiratory** Blank page, then check. Check against the WAPT objectives	Spaced recall **Recall: renal** Plus Monday's heart. Check against the WAPT objectives	Spaced recall **Week 2 recall** Blank-page dump of the whole week. Check against the WAPT objectives	**Day off** No studying. Rest is part of the plan.
10 min break							
08:40 09:40 60 min	Anatomy **Heart and mediastinum** Chambers, valves, coronary arteries and the great vessels. Find a lecture on this topic	Physiology **Blood pressure control** Cardiac output, resistance, baroreceptor reflex and RAAS. Find a lecture on this topic	Anatomy **Respiratory tract** Airways, lung lobes, pleura and the diaphragm. Find a lecture on this topic	Anatomy **Kidney and urinary tract** Gross kidney structure, the nephron, ureters and bladder. Find a lecture on this topic	Physiology **Acid–base and fluids** Buffers, respiratory and renal compensation, fluid compartments. Find a lecture on this topic	Timed mock **Mock 1, part A** Timed, exam conditions. Questions from all three components. Check against the WAPT objectives	
10 min break							
09:50 10:50 60 min	Physiology **Cardiac cycle and ECG** Pressure and volume changes, conduction system, ECG waves. Find a lecture on this topic	Anatomy **Blood vessels** Main arterial branches, venous return and portal systems. Find a lecture on this topic	Physiology **Ventilation and gas exchange** Breathing mechanics, compliance, V/Q matching, the O_2–Hb curve. Find a lecture on this topic	Physiology **Renal function** GFR, tubular reabsorption and secretion, countercurrent mechanism. Find a lecture on this topic	Molecular Medicine **Mutations and DNA repair** Types of mutation, repair pathways and inheritance patterns. Find a lecture on this topic	Timed mock **Mock 1, part B** Continue under the same conditions. Check against the WAPT objectives	
25 min break: move, eat							
11:15 12:15 60 min	MCQ practice **X-type set** Heart structure and function. Check against the WAPT objectives	MCQ practice **X-type set** Circulation and blood pressure. Check against the WAPT objectives	MCQ practice **X-type set** Respiratory system. Check against the WAPT objectives	MCQ practice **X-type set** Kidney structure and function. Check against the WAPT objectives	MCQ practice **X-type set** Acid–base and mutations. Check against the WAPT objectives	Consolidation **Mark and error log** Score each component separately. Note why each error happened. Check against the WAPT objectives	
10 min break							
12:25 12:55 30 min	Consolidation **Redraw** A Wiggers diagram with valve openings and closings marked. Check against the WAPT objectives	Consolidation **Flowchart** Short-term and long-term blood pressure control. Check against the WAPT objectives	Consolidation **Redraw** The O_2–Hb curve and what shifts it left or right. Check against the WAPT objectives	Consolidation **Label a nephron** What is reabsorbed or secreted in each segment. Check against the WAPT objectives	Consolidation **Worked examples** Acid–base problems by hand, with no calculator. Check against the WAPT objectives	Consolidation **Plan week 3** Move extra time towards the lowest-scoring component. Check against the WAPT objectives	

Spaced recall · Anatomy · Physiology · Molecular Medicine · X-type MCQ practice · Consolidation and review · Timed mock

Week 3: Nerves, hormones, gut and reproduction

Neuroscience, endocrine control, digestion and reproduction. The densest week, so protect your Sunday.

Time	Mon Day 15	Tue Day 16	Wed Day 17	Thu Day 18	Fri Day 19	Sat Day 20	Sun Day 21
08:00 08:30 30 min	Spaced recall **Spaced recall: weeks 1 and 2** Blood, immunity and the kidney. Check against the WAPT objectives	Spaced recall **Recall: neurons, CNS** Blank page, then check. Check against the WAPT objectives	Spaced recall **Recall: autonomic, cranial nerves** Plus week 2 blood pressure. Check against the WAPT objectives	Spaced recall **Recall: endocrine, senses** Blank page, then check. Check against the WAPT objectives	Spaced recall **Recall: glands, GI anatomy** Plus Monday's neurons. Check against the WAPT objectives	Spaced recall **Week 3 recall** Blank-page dump of the whole week. Check against the WAPT objectives	**Day off** No studying. Rest is part of the plan.
10 min break							
08:40 09:40 60 min	Physiology **Neurons and synapses** Resting and action potentials, synaptic transmission. Find a lecture on this topic	Physiology **Autonomic system and reflexes** Sympathetic versus parasympathetic, receptors, the reflex arc. Find a lecture on this topic	Physiology **Special senses** Vision, hearing and balance, taste and smell. Find a lecture on this topic	Physiology **Thyroid, adrenal, pancreas** Thyroid hormones, cortisol, aldosterone, insulin and glucagon. Find a lecture on this topic	Physiology **Digestion and the liver** Secretions, absorption, GI hormones and liver functions. Find a lecture on this topic	Timed mock **Mock 2, part A** Full timed paper, all three components. Check against the WAPT objectives	
10 min break							
09:50 10:50 60 min	Anatomy **Brain and spinal cord** Lobes, brainstem, ventricles, meninges and spinal tracts. Find a lecture on this topic	Anatomy **Cranial nerves** All twelve: type, exit point and function. Find a lecture on this topic	Physiology **Endocrine principles** Hormone classes, receptors and the hypothalamic–pituitary axis. Find a lecture on this topic	Anatomy **GI tract and peritoneum** Gut wall layers, organs, peritoneal relations and blood supply. Find a lecture on this topic	Physiology **Reproduction** Reproductive anatomy, the menstrual cycle, pregnancy hormones. Find a lecture on this topic	Timed mock **Mock 2, part B** Continue under exam conditions. Check against the WAPT objectives	
25 min break: move, eat							
11:15 12:15 60 min	MCQ practice **X-type set** Neurons and the central nervous system. Check against the WAPT objectives	MCQ practice **X-type set** Autonomic system and cranial nerves. Check against the WAPT objectives	MCQ practice **X-type set** Senses and endocrine principles. Check against the WAPT objectives	MCQ practice **X-type set** Endocrine glands and GI anatomy. Check against the WAPT objectives	MCQ practice **X-type set** Digestion and reproduction. Check against the WAPT objectives	Consolidation **Mark and error log** Compare each component with Mock 1. Check against the WAPT objectives	
10 min break							
12:25 12:55 30 min	Consolidation **Redraw** An action potential with the channel states at each phase. Check against the WAPT objectives	Consolidation **Table from memory** The twelve cranial nerves, then check. Check against the WAPT objectives	Consolidation **Axis diagrams** Each axis with its feedback arrows. Check against the WAPT objectives	Consolidation **Flowchart** Blood glucose regulation after a meal and during fasting. Check against the WAPT objectives	Consolidation **Redraw** Menstrual-cycle hormone curves against the ovarian and uterine phases. Check against the WAPT objectives	Consolidation **Plan week 4** Name your weakest component and its three weakest topics. Check against the WAPT objectives	

Spaced recall · Anatomy · Physiology · Molecular Medicine · X-type MCQ practice · Consolidation and review · Timed mock

Week 4: Movement, applied molecular medicine, run-in

The last new content, a final full simulation on Friday, and a deliberately light weekend.

Time	Mon Day 22	Tue Day 23	Wed Day 24	Thu Day 25	Fri Day 26	Sat Day 27	Sun Day 28
08:00 08:30 30 min	Spaced recall **Spaced recall: week 2** Heart and lungs. Check against the WAPT objectives	Spaced recall **Recall: joints, muscle** Blank page, then check. Check against the WAPT objectives	Spaced recall **Spaced recall: week 3** Nerves and hormones. Check against the WAPT objectives	Spaced recall **Recall: cancer, apoptosis** Plus week 1 immunology. Check against the WAPT objectives	Spaced recall **Rapid round** Five minutes per system across the whole course. Check against the WAPT objectives	Spaced recall **Definitions and normal values** Light, confident recall only. Check against the WAPT objectives	**Day off** Rest. The test is tomorrow, so no studying today.
10 min break							
08:40 09:40 60 min	Anatomy **Bones and joints** Joint classification, synovial joints and terms of movement. Find a lecture on this topic	Anatomy **The limbs** Shoulder, hip and knee, and the main limb nerves and muscle groups. Find a lecture on this topic	Molecular Medicine **Cancer biology** Oncogenes, tumour suppressors and the hallmarks of cancer. Find a lecture on this topic	Molecular Medicine **HIV** Structure, replication cycle and where drugs act. Find a lecture on this topic	Timed mock **Final simulation, part A** Strict exam conditions and pacing. Check against the WAPT objectives	Consolidation **Weakest component** Targeted repair of its highest-yield topics. Check against the WAPT objectives	
10 min break							
09:50 10:50 60 min	Physiology **Muscle** Sliding filaments, excitation–contraction coupling, muscle types. Find a lecture on this topic	Physiology **Skin and temperature** Skin layers, heat gain and heat loss, thermoregulation. Find a lecture on this topic	Molecular Medicine **Stem cells and apoptosis** Potency, differentiation, intrinsic and extrinsic apoptosis. Find a lecture on this topic	Molecular Medicine **Malaria** The Plasmodium life cycle in human and mosquito. Find a lecture on this topic	Timed mock **Final simulation, part B** No new content after today. Check against the WAPT objectives	Consolidation **Key diagrams** Redraw: coagulation, nephron, action potential, endocrine axes. Check against the WAPT objectives	
25 min break: move, eat							
11:15 12:15 60 min	MCQ practice **X-type set** Joints and muscle. Check against the WAPT objectives	MCQ practice **X-type set** Limbs and skin. Check against the WAPT objectives	MCQ practice **X-type set** Cancer, stem cells and apoptosis. Check against the WAPT objectives	MCQ practice **X-type set** HIV and malaria. Check against the WAPT objectives	Consolidation **Mark and error log** Score each component separately. Check against the WAPT objectives	Consolidation **Lists** Cranial nerves and other must-know lists. Check against the WAPT objectives	
10 min break							
12:25 12:55 30 min	Consolidation **Redraw** A sarcomere relaxed and contracted. Check against the WAPT objectives	Consolidation **Table** Major limb nerves and what an injury to each causes. Check against the WAPT objectives	Consolidation **Concept map** p53, the cell cycle and apoptosis on one page. Check against the WAPT objectives	Consolidation **Redraw** Both life cycles from memory. Check against the WAPT objectives	Consolidation **Fix five** Close the five errors most likely to recur. Check against the WAPT objectives	Consolidation **Get ready** Confirm venue and time, pack ID and stationery, plan an early night. Check against the WAPT objectives	

How to use this timetable

A free four-week plan for the Wits Additional Placement Test (GEMP entry): Human Anatomy, Human Physiology and Molecular Medicine. Four hours a day, Monday to Saturday, with every Sunday off. Times are a suggestion; keep the order and lengths of the blocks and shift the clock to suit your day. Count back four weeks from your test date: Day 1 is the Monday four weeks before.

How each day works

Spaced recall (30 min). Start with a blank page and write down everything you remember about the topics named, before opening any notes. It deliberately reaches back to older weeks, not just yesterday.

Two learning hours. Study the anatomy and physiology of the same system together. Read against the official objectives first, then use any textbook or lecture you like to fill gaps.

Practice and consolidation. An hour of X-type questions on the day's material from any source you have. If you have none, turn each objective into four or five true-or-false statements and test yourself on them. Then spend 30 minutes turning the day into one diagram or summary you could redraw from memory.

Revision and mocks

Every Saturday is a review day: blank-page recall of the whole week, weak-spot repair, and timed practice. Mocks fall on the Saturdays of weeks 2 and 3 and on the Friday of week 4, so each one leaves time to fix what it shows.

Each component is passed separately. Score Anatomy, Physiology and Molecular Medicine on their own after every mock. A strong score in one cannot carry a weak one, so shift Saturday time towards whichever is lowest.

In X-type questions every statement is judged on its own, and the number of true statements can vary. Practise deciding each one independently rather than looking for a pattern.

Before you start

The objectives define the syllabus. Download the current Anatomy, Physiology and Molecular Medicine objectives from the Wits GEMP page and check each topic off against them. Videos are a supplement and will sometimes go beyond what is examined.

Use whatever resources suit you. The lecture links simply open a YouTube search for the topic, so you can choose any clear explanation. A standard anatomy or physiology textbook works just as well.

Confirm your date and venue from your official Wits communication. The test is usually on a Monday, so this plan ends on the Sunday before. Write your dates into the day headings before you start.
